## **Inspection Sticker Adhesion To Vehicle Windshields**

October 31, 2008

08-007

As you are probably aware, there is a problem with inspection stickers not properly adhering to vehicle windshields. In order for the adhesive on the back of the stickers to work properly, the windshields need to be properly cleaned prior to affixing the new sticker. It is our recommendation you thoroughly clean the windshield area where the sticker will be applied prior to affixing it. An alcohol based cleaner such as Windex or similar product is recommended.

Do not use any products, such as WD-40 to remove an old sticker. The old inspection sticker and adhesive residue needs to be scraped off with a razor blade.

Should you have any questions regarding this bulletin, please telephone the Vermont Department of Motor Vehicles Inspection Unit at 802-828-2094 or your area DMV Field Inspector.
